

# Refractron Advanced Porous Ceramics

High purity White Alumina Air Stones

### White Alumina Benefits:

- Increased longevity compared to Silica
- Superior strength and durability
- Enhanced chemical resistance allows for thorough cleaning
- Strength allows for a thinner wall resulting in lower pressure drop
- Lower energy usage
- Self-Weighting

Advantages of using Refractron high purity White Alumina Air Stones:

Fine bubble aeration is an efficient technique to improve oxygen transfer due to the large collective surface area of its bubbles. Smaller bubbles take more time to reach the surface so not only is the surface area maximized but so are the number of seconds each bubble spends in the water.
